

Appl. No. 09/965,960
Amdt. dated September 13, 2005
Reply to Office action of June 20, 2005

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A method for securing a portable electronic device, comprising:
 - (a) generating a security message;
 - (b) transmitting said security message to said portable electronic device;
 - (c) performing an ~~destructive~~ action on said portable electronic device in response to said security message, said action selected from a group consisting of causing a short circuit, placing the portable electronic device in a mode in which a function of the portable electronic device is disabled, operating memory at an incorrect clock rate, causing said portable electronic device to report its location, and precluding access to data stored in the portable electronic device.
2. (Canceled).
3. (Canceled).
4. (Currently amended) The method of claim 1 wherein said ~~destructive action~~ mode prevents said portable electronic device from transmitting or releasing information.
5. (Original) The method of claim 1 wherein (a) includes digitally signing said security message.
6. (Original) The method of claim 5 further including the portable electronic device verifying the digital signature.

Appl. No. 09/965,960
Amdt. dated September 13, 2005
Reply to Office action of June 20, 2005

7. (Original) The method of claim 5 using an encryption key to digitally sign the security message.
8. (Original) The method of claim 7 wherein said encryption key is stored in an encrypted form before being used to digitally sign the security message.
9. (Currently amended) The method of claim ~~[[6]]~~ 8 wherein a person or entity is authorized to cause (b) to happen and only that person or entity is capable of causing said encrypted encryption key to be decrypted so as to be used to digitally sign the security message.
10. (Original) The method of claim 1 wherein (b) occurs after a request has been received to perform the destructive action.
11. (Original) The method of claim 10 wherein a person or entity is authorized to cause (b) to happen and (b) occurs after said requesting person or entity is verified.
12. (Original) The method of claim 1 further including encrypting the security message and said portable device decrypts the encrypted security message.
13. (Original) The method of claim 1 further including digitally signing said security message and including a unique value that changes each time (a) is performed.
14. (Original) The method of claim 13 further including receiving said digitally signed security message and authenticating the message using said unique value.
15. (Original) The method of claim 13 wherein said unique value includes a time stamp.

Appl. No. 09/965,960
Amdt. dated September 13, 2005
Reply to Office action of June 20, 2005

16. (Original) The method of claim 13 wherein said unique value includes a random number.

17. (Original) The method of claim 13 wherein said unique value includes a non-repeating sequence number.

18. (Currently amended) The method of claim 1 further including permitting the ~~destructive~~-action to be aborted once the security message is received by said portable electronic device.

19. (Currently amended) The method of claim 18 wherein permitting the ~~destructive~~-action to be aborted includes providing the portable electronic device with an abort key that is verified by the portable electronic device.

20. (Original) The method of claim 1 further including permitting a specified number of tasks to be performed by the portable electronic device before (c) is performed.

21. (Original) The method of claim 1 further including permitting tasks to be performed by said portable electronic device for a specified time period before (c) is performed.

22. (Original) The method of claim 1 further including permitting a specified number of tasks to be performed during a specified period of time and performing (c) after either said specified number of tasks have been performed or the specified time period has expired.

23. (Currently amended) A portable electronic device, comprising:
a CPU;
a memory device coupled to said CPU;
a decryption key stored in said memory device;

Appl. No. 09/965,960
Amdt. dated September 13, 2005
Reply to Office action of June 20, 2005

an input/output ("I/O") module coupled to said CPU which receives messages from an external security station;

wherein said CPU receives security messages from said security station via said I/O module and, in response, performs ~~a destructive action~~ selected from a group consisting of causing a short circuit, placing the portable electronic device in a mode in which a function of the portable electronic device is disabled, operating memory at an incorrect clock rate, causing said portable electronic device to report its location, and precluding access to data stored in the portable electronic device.

24. (Canceled).

25. (Currently amended) The portable electronic device of claim 23 wherein said ~~destructive action mode~~ prevents said portable electronic device from transmitting information.

26. (Original) The portable electronic device of claim 23, wherein said security messages received at said I/O module include a digital signature and said CPU verifies the digital signature.

27. (Original) The portable electronic device of claim 26 wherein said CPU uses said decryption key to verify the digital signature.

28. (Original) The portable electronic device of claim 23 wherein said CPU verifies a unique value included in said security message, said unique value capable of being different each time the portable electronic device receives a security message.

29. (Original) The portable electronic device of claim 28 wherein said CPU authenticates the security message using said unique value.

Appl. No. 09/965,960
Amdt. dated September 13, 2005
Reply to Office action of June 20, 2005

30. (Original) The portable electronic device of claim 28 wherein said unique value includes a time stamp.

31. (Original) The portable electronic device of claim 28 wherein said unique value includes a random number.

32. (Currently amended) The portable electronic device ~~method~~ of claim 28 wherein said unique value includes a non-repeating sequence number.

33. (Currently amended) The portable electronic device of claim 23 wherein said CPU permits the ~~destructive-action~~ to be aborted once the security message is received by said portable electronic device.

34. (Currently amended) The portable electronic device of claim 33 wherein said CPU permits entry of an abort key to cause the ~~destructive-action~~ to be aborted.

35. (Currently amended) The portable electronic device of claim 23 wherein said CPU permits a specified number of tasks to be performed by the portable electronic device before performing said ~~destructive-action~~.

36. (Currently amended) The portable electronic device of claim 23 wherein said CPU permits tasks to be performed for a specified time period before said ~~destructive-action~~ is performed.

37. (Original) The portable electronic device of claim 23 wherein said CPU permits a specified number of tasks to be performed for a specified time period and, after either the specified number of tasks have been performed or the specified time period has elapsed, said CPU performs said ~~destructive-action~~.

Appl. No. 09/965,960
Amtd. dated September 13, 2005
Reply to Office action of June 20, 2005

38. (Original) The portable electronic device of claim 23 wherein said decryption key cannot be overwritten.

39. (Original) The portable electronic device of claim 23 wherein said decryption key cannot be copied.

40. (Currently amended) A security station through which a user of a portable electronic device can initiate a security response associated with the portable electronic device, comprising:

a CPU;

a registry of user information accessible by said CPU and including an identifier value associated with the portable electronic device; and

a communication port to facilitate communication with the portable electronic device;

wherein said CPU generates a security message which is transmitted through the communication port to the portable electronic device to cause the portable electronic device to perform a destructive-security action selected from a group consisting of causing a short circuit to occur in said portable electronic device, transitioning the portable electronic device in to a mode in which a function of the portable electronic device is disabled, causing memory to be operated in said portable electronic device at an incorrect clock rate, causing said portable electronic device to report its location, and causing said portable electronic device to preclude access to data stored in the portable electronic device.

41. (Original) The security station of claim 40 wherein said CPU digitally signs said security message with a key associated with the user.

42. (Original) The security station of claim 41 wherein said CPU encrypts said security message with said key.

Appl. No. 09/965,960
Amdt. dated September 13, 2005
Reply to Office action of June 20, 2005

43. (Original) The security station of claim 40 wherein said CPU encrypts said security message with a key associated with the user.

44. (Canceled).

45. (Currently amended) The security station of claim 40 wherein said security message mode causes said portable electronic device to cease transmitting data.

46. (Currently amended) The security station of claim 40 wherein said security message causes said portable electronic device to preclude access to any data stored in the portable electronic device.

47. (Canceled).

48. (Original) The security station of claim 40 wherein said security message permits the portable electronic device to perform a specified number of tasks after which the portable electronic device performs said destructive action.

49. (Original) The security station of claim 40 wherein said security message permits the portable electronic device to perform tasks for a specified amount of time after which the portable electronic device performs said destructive action.

50. (Original) The security station of claim 40 wherein said security message permits the portable electronic device to perform a specified number of tasks for a specified amount of time, and after either the specified number of tasks have been performed or the specified amount of time has expired, the portable electronic device performs said destructive action.

51. (Original) The security station of claim 40 wherein the security message can be aborted by the portable electronic device.

Appl. No. 09/965,960
Amdt. dated September 13, 2005
Reply to Office action of June 20, 2005

52. (New) The method of claim 1 further comprising determining which of a plurality of entities initiated said security message and selecting the action based on the determined entity.

53. (New) A portable electronic device, comprising:
a CPU;
a memory device coupled to said CPU;
a decryption key stored in said memory device;
wherein said CPU receives a security message from one of a plurality of entities and selects a destructive action to be performed in said portable electronic device based on a determination as to which entity sent the security message.

54. (New) The portable electronic device of claim 53 wherein the destructive action comprises causing a short circuit.

55. (New) The portable electronic device of claim 53 wherein the destructive action comprises placing the portable electronic device in a mode in which a function of the portable electronic device is disabled.

56. (New) The portable electronic device of claim 53 wherein the destructive action comprises operating memory at an incorrect clock rate.

57. (New) The portable electronic device of claim 53 wherein the destructive action comprises causing said portable electronic device to report its location.

58. (New) The portable electronic device of claim 53 wherein the destructive action comprises precluding access to data stored in the portable electronic device.

Appl. No. 09/965,960
Amdt. dated September 13, 2005
Reply to Office action of June 20, 2005

59. (New) A method for securing a portable electronic device, comprising:
(a) generating a security message;
(b) transmitting said security message to said portable electronic device;

(c) selecting a destructive action to be performed on said portable electronic device based, at least in part, on an identity of an entity that transmitted said security message.

60. (New) The method of claim 59 wherein said destructive action comprises causing a short circuit.

61. (New) The method of claim 59 wherein said destructive action comprises placing the portable electronic device in a mode in which a function of the portable electronic device is disabled.

62. (New) The method of claim 59 wherein said destructive action comprises operating memory at an incorrect clock rate.

63. (New) The method of claim 59 wherein said destructive action comprises causing said portable electronic device to report its location.

64. (New) The method of claim 59 wherein said destructive action comprises precluding access to data stored in the portable electronic device.
